CLOUD
FOR THE WIREXPERT SERIES

IT Networks

eXport Cloud *Enterprise*

optimize!
softing

With **eXport Cloud Enterprise** you operate your own cloud based platform for the exchange of measurement data and measurement lists of your WireXpert series.

Project managers can use this software to obtain measurement data from various installation teams via the Internet and to control measurement projects using LBT files (List-Based-Testing).
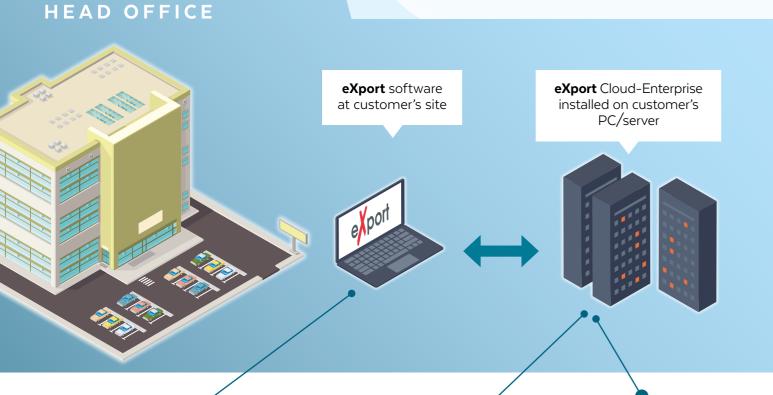

INTERNET

This solution makes you completely independent of third-party cloud services, as you run the server software on your own IT infrastructure. You are in control of your data at all times, as you are always in possession of the data and the data do not have to be stored on external servers.

eXport
RECEIVES measurement data **AND SENDS** measurement lists (LBT files)

WireXpert
SENDS measurement data **AND RECEIVES** measurement lists (LBT files)

HEAD OFFICE

eXport software at customer's site

eXport Cloud-Enterprise installed on customer's PC/server

CONSTRUCTION SITE

Access point or smartphone serves as a hotspot for internet access

WireXpert connects to available wireless access point or smartphone

There are **no recurrent monthly costs**, unlike with SaaS products (Software as a Service).

Only minimum hardware requirements on your enterprise network need to be fulfilled. The hardware required is a commercially available minicomputer or a laptop with Windows 10.

Unique: eXport Cloud Enterprise is installed in your enterprise network and is therefore **not dependent on a third party.**

The customer owns the software, all measurement data are stored **in your own network**.

The WireXpert can use common access points or smartphones with a hot spot function to connect to the internet.

Any number of WireXpert devices or of users can be connected by an eXport Cloud Enterprise installation.

All WireXpert devices can be upgraded with this feature.
